Hypo plastic Right Upper Limb

P Umar Farooq Baba

Department of Plastic Surgery, SKIMS

A two-day-old male child born with full term normal delivery (FTND), second in birth order, presented with hypoplastic right upper limb. The arm is hypoplastic with a very short part of the forearm and the hand is represented by a small lop of tissue only. There is no history of any consanguinity, drug intake, radiation exposure or any significant maternal febrile illness during the pregnancy. The rest of the physical examination of the baby revealed no gross abnormality.

Conflict of interest: None

Written informed Consent: Taken
